

AJOGU JOSEPH

Full-Stack Developer & AI Engineer

ajogujoseph0317@gmail.com | github.com/GoabDev | ajogujoseph.vercel.app

PROFESSIONAL SUMMARY

Full-stack developer and AI engineer with production experience spanning enterprise systems, agency client delivery, and freelance builds. Ships fullstack products using Next.js, React, Node.js, and Supabase, and builds AI-driven systems including LLM-integrated agents and RAG-based chatbots. Combines hands-on UI/UX design sensibility with engineering execution, with a consistent track record of cutting manual workload and improving user experience through automation and thoughtful interface redesign.

CORE SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS

AI/ML & Automation: LLM API integration (Claude, GPT, OpenRouter), RAG pipelines, vector search (Supabase pgvector), prompt engineering, agentic workflows, Playwright browser automation

Frameworks & Libraries: Next.js, React, Node.js, Express.js, React Native, Expo

Backend & Data: Supabase, PostgreSQL, SQLite, Firebase, REST APIs

UI/UX & Design: UI/UX redesign, responsive interfaces, design systems, Figma, Photoshop, Canva

Product & Ops: Role-based access control, admin dashboards, notification workflows, WebSocket real-time updates

Tools: Git, GitHub, Docker

PROFESSIONAL EXPERIENCE

AI Engineer — WhatsApp AI Chatbot & RAG System (Contract)

Jan 2026 – Mar 2026

Alliance & General Insurance · Remote

- Built an agentic WhatsApp AI chatbot (Node.js/TypeScript, Baileys, OpenRouter, Supabase with pgvector) capable of executing tasks and calling internal company APIs on behalf of agents, rather than just answering queries.
- Reduced staff query-handling load by enabling accurate 24/7 automated responses to common customer questions, cutting response times significantly versus manual handling.
- Designed a dual-scope RAG architecture separating customer-facing and internal knowledge using metadata tags and a staff allowlist.
- Built structured knowledge-intake templates to collect department-level Q&A data feeding the retrieval system.

Frontend / Full-Stack Developer

Nov 2024 – Present

ProxySocks (Software Agency) · Remote

- Led a full UI/UX revamp of the ProxySocks platform, shipping a staff dashboard with new features to help teams manage client interactions more effectively.
- Revamped the "Beauty At Your Door" client site, adding appointment booking and shopping functionality that made it easier for customers to book services and purchase items.
- Refactored frontend architecture and introduced client-side caching, reducing repeated network fetches and improving page responsiveness.
- Delivered client engagements for Cosmic Forge HealthNet (wallet/transaction interfaces, AI Health and AI Doctor Assistant modules) and xHero (full frontend and backend for an employee rewards platform, including an admin monitoring dashboard).

IT Support / Software Developer

May 2023 – Nov 2024

Alliance & General Insurance

- Built a desktop automation system (Playwright, Node.js, TypeScript) for policy corrections and NIID uploads, cutting correction time from ~3 minutes to under 1 minute and upload time from ~5 minutes to ~2 minutes, with SSE-based live progress tracking.

- Developed a full attendance platform with 100-metre geofencing, branch-aware clock-in/out flows, anti-malpractice device limits, and admin controls for departments and staff notifications.
- Built an internal vehicle management platform to track company vehicles, expenses, and compliance documentation, with automated reminder emails for expiring records.
- Delivered a human-in-the-loop Claims AI Agent integrating multiple AI model providers (Claude, GPT) to assist claims handlers, including a manual fallback mode for testing and flexibility.

Freelance Web Developer & Designer

Feb 2021 – Nov 2022

Self-employed · Remote (while completing BSc)

- Built and designed the Panzel agency website as a freelance client project.
- Built Cyndy Educational Pathways, a student registration and payment platform replacing manual WhatsApp coordination, with manual transfer and Paystack payment options plus admin approval controls.
- Co-developed a student food delivery platform enabling students to order food from onboarded campus vendors, with fellow students handling deliveries; grew the platform to a solid base of active student users and vendors.

EDUCATION

BSc, Computer Science

Crawford University, Nigeria · Nov 2020 – Dec 2024
